

Title: New bottles; new wine: Moodle-based testing tools and ways to improve the quality of our tests

Speaker: Agus Santoso

Abstract:

Online testing has been around for some time in education. In spite of the pros and cons, let's work together to create a brand-new testing environment so that the **“New bottles; old wine” paradigm** can be changed to **“New bottles; new wine”**. Can we do that? It is now or never.

In this workshop, the speaker will be sharing his own experiences in applying his Moodle-based tests in his classes. After that, the participants will have some hands-on experiences in devising some Moodle-based test items.

A special website that has been created to provide more experiments outside the workshop. Apart from that, the participants are also encouraged to share their personal experiences in the forum discussion already set up for this purpose.

Happy workshopping!
